DESCRIPTION

The HEF4539B is a dual 4-input multiplexer with common select logic. Each multiplexer has four multiplexer inputs (I_0 and I_3), an active LOW enable input ($\overline{E}$) and a multiplexer output (O). When HIGH, $\overline{E}$ forces O of the respective multiplexer LOW, independent of the select inputs (S_0 to S_1) and I_0 to I_3. When $\overline{E}$ is LOW, S_0 and S_1 determine which multiplexer input (I_0 to I_3) on each of the multiplexers is routed to the respective multiplexer output (O).
